

Fiasco An Alternate Calendar of Events

Conference-goers notice performance and generate new events for the performers using mobile communication devices

server running MySQL database

Data sent wirelessly to server, which updates the database...

One performer wears a wireless camera that streams video to the server

The performers turn the events into improvised games in public spaces

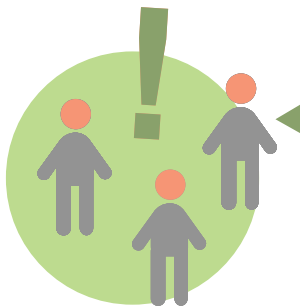

dynamic website

...and updates the website

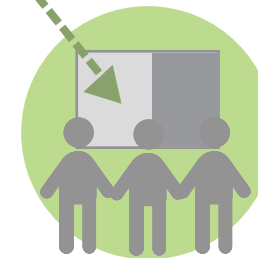

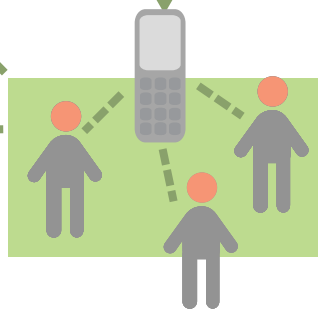

Streaming video from the wireless cameras worn by the performers plays on the website next to the schedule so that remote viewers can participate

The performers have to run faster and faster to keep up with the changing schedule

...and sends a text message to the performers informing them of the change to the schedule

The schedule is projected on a large display so that it maintains a physical presence in the space of the conference and prompts conference-goers to generate more events
